- The team member is satisfied with the collaboration with the other t

- The team member is satisfied with the quality of the requirements he with

- The team member enjoys working in this team and on this project

- The team member understands the objectives and the vision of the p entirely committed to deliver

- There are moments when the team member is not completely satisfi things are working on the project (requirements, interaction with oth quality of the project, to much work/pressure, the project itself …), company

- The team member is demotivated either because of the project, beca company or for a personal reason and this affects his/her work

- that you can install the UI application on your computer and test the

- we have the import (from DFS) functionality working and that now

- happy with the performance of the import command

- we had better communication with the FE team (discussions with Se

- the fact that we finished the surveys

**What went well**

- we are moving in the right direction with the Pricing Cockpit

- more feedback requested from the team so we cleared out many thir

- the fronted part starts to take shape on DF

- the integration between DF and DFS worked well

- Eduard will start soon

- exchange with the CM team (we can optimise these meetings in the

- we have the Data Lake infrastructure in production before the due d

**Puzzling**

- the E-comm UI pipelines and workflows for the environments have
- the API Gateway automatic deployment was integrated with the aut

- we still have work to do on DF; we didn't finish the work when we'
- didn't make the push on DIS (because of Cyberparts) ++
- many blocked tickets that prevented us to reach the commitment
- a ticket blocked in the testing column
- the requirements for implementing the distribution of the adjusted fo
- Exasol issues that caused one of our workflows to fail

**Description**

Improve the performance of the import command

**What can be improved**

the specifications on some of the tickets were not complete or changed aft
implemented ++++

the velocity is much lower this sprint

**Description**

| | |
|---|---|
| **Mood** | (big grin) 😌 (big grin) (big grin) 😃 (big grin) 😃 😌 (big grin) ?? |
| **What went well** | • Even if at the start of the week seemed impossible we finish tickets from the backlog |
| | • Achieved the scope of the sprint |
| | • Smooth sprint |
| | • Production hotfix successful |
| | • New features on basic config while working on DF |

- Collaboration with SAP Pro team +

- Made steps forward with DHS by discussing the steps ahead

- QA team did a great job as they had a lot of things to cover

- Collaboration with SCM is really good

- Collaboration between Andrei and Camelia

- Deployments done by development team without devops

- Team quickly managed to address the changes and work tha

- We have a plan for DHS and we know what needs to be don

- DF work on UI started

| | |
|---|---|
| **Puzzling** | Collaboration with Cyberparts |
| | **Description** |
| **What can be improved** | Had some bugs on the DF filtering . The malfunction was caused ordering by product code, this case was not handled on the BE. |
| | Prioritise the QA work, make sure that we have progress also on t part |

DevOps - Retro - 21st January 2021

| **DevOps** | **Description** |
|---|---|
| | Kubernetes cluster upgrade |
| | Automation for api gateway endpoints - no manual intervention |
| | Smooth prod deployment without incidents + |
| **What went well** | Good progress on the tickets in the iteration |
| | Nicu did the prod push on MPS from start to end |
| | Viable solution regarding the pods + |
| | New versioning that was implemented |
| | QA team involvement in API deployment - good collaboration |

Calin and Dragos presented in the demo

| | |
|---|---|
| **Puzzling** | Creating snapshots from prod to pre-production - discuss this aft |

**Description**

Take into consideration adding api gateway deployment to the pi

| | |
|---|---|
| **What can be improved** | |

More tickets ready for development

E-commerce cloud - Retro - 14th January 2021

| **Mood** | 😔 😔 (big grin) (big grin) 😔 (big grin) (big grin) (big grin) (big g |
| **What went well** | Good results on the load tests ++ |
| | Managed to make prod push with the changes required by the CM |
| | Prod push went smooth +++++++ |
| | Agile enough to deal with the changes requested by CM |
| | Straight forward sprint, achieved all that was expected |
| | New versioning implemented and working ++ |

Started DF work

Performance improvements in prod

DHS POC looks like a software project and can be deployed ++

New UI architecture deployed on prod without major issues +

SCM team gave good feedback after deployment

Johannes is impresed by the DHS POC

Happy with the progress and communication

Good progress during this sprint with all the vacations and all the

Mihai was able to make the first production deployment using the

Good effort from the team to finish working on the last minute req

Good that we are finally up-to-date with the code in production as

Good feedback from the SCMs and CMs regarding the production

We have now load tests that we can run before each production pu

We have now the DHS POC and documentation

Andrei made good progress in defining the User Profile epics

Implementation of the filters took longer than expected as it was t

| **Puzzling** | AO speed increased due to improvements done on ecomm |
| | That we still don't have a solution for deploying individual UI pro |

| **What can be improved** | **Description** |
| --- | --- |
| | More action on the Testing board |
| | When creating stories for the devops board try not to use subtasks be missed out |
| | Late change requests by CMs. Misunderstanding on price relation |

DevOps - Retro - 7th January 2021

**DevOps**

**What went well**

Vacation period well planned +

No important actions missed

No incidents +

No major issues on deployments

Dev team more and more familiar with deployment process

Changes to MPS went well

**Puzzling**

Take a look on older tickets

**What can be improved**

Structure of the ticket created by the dev team or POs
